

MINIMAX ROLLING INSTALLER BAG

With twice the storage space and extra pockets, the MiniMax Bag maximizes your ability to handle mini coax wiring in the field. The larger rolling bag with telescoping handle includes a compartment that holds two 250' spools of mini RG59 cable or 50' or 5-pack. It also features additional storage pockets outside the bag to organize connectors, tools and accessories. The MiniMax Bag can be bought separately, or as a customized kit which includes the connectors, tools and accessories you use the most.

THE TITAN

Hand-Held Battery Operated Hydraulic Crimp Tool

A great addition to any large installation site. This labor-saving tool has a rechargeable battery which lasts an average of 150 crimps. Simply install the connector and press the trigger to complete the crimp. The Titan-C works with WSE one-piece compression connectors and the Titan-HC works with WSE hex crimp connectors. In applications where many crimps are done each day, this tool pays for itself in faster installation time and reduced risk of repetitive-motion injury. Each tool includes carrying case and battery charger.

Compatible with White Sands Engineering one-piece connectors for mini RG59, RG59 and RG6 cables only. Specialty dies available. Contact WSE or visit our web site for full product specifications.

Titan with Speed Die
