

SPH2436 500 Series Signature Pedestal Housing

The SPH2436 pedestal has been the broadband industry standard for housing fiber optic nodes for many years. Now, Channell has added the Self-Lock® cover security system and increased the size of the cover and base to better accommodate larger fiber optic nodes and provide more fiber storage.

The new self-locking SPH2436 pedestal comes standard with Channell's Self-Lock security system and the proven 500 Series Heat Dissipation Cover HDC® that is fully vented on all four sides and has an insulated attic area to help reduce costly node failures caused by overheating. The new enlarged base is the same as Channell's SGLB2436 "Shutter Box" Series base that features unsurpassed "I-Beam" strength and the highest sidewall/strength deflection ratings in the industry. Additional improvements to the SPH2436 pedestal

include standard sub-surface cross bar cable racking and a horizontal fiber bracket.

Applications

The SPH2436 pedestal can be used to house a fiber optic node and butt splice enclosure combination or trunk and dual trunk amplifiers.

Features

- Self-Lock locking system
- 500 Series heat dissipation cover (HDC)
- 360° access to working equipment
- Multiple self-locking options
- Multiple cover color choices
- Special sub-surface bracketry designed for cable management and securing splice enclosure
- Winterized drop hole
