Low Profile SPH1212 Series Enclosures

Announcing The New Compact SPH12123

The Signature Pedestal Housing Series Provides A Lower Profile Without Reducing Protection Or Performance Of Sensitive Equipment.

The new low profile versions of the SPH12123 Signature Pedestal Housings were originally designed for applications in New Zealand and Canada. Featuring Channell's 600 Series HDC™ Heat Dissipation Covers, the SPH12123 offers reduced height to meet the broadband customer requirements. The application called for a smaller product profile without sacrifice or reduction in protection or performance in the broadband electronic equipment installed.

SPH Features Enhance Security and Maintenance Throughout The Lifetime Of The Enclosure.

SPH Series housings provide a protective, aesthetically pleasing low profile design that is unaffected by severe temperatures. The Channell Self-Lock™ feature provides a secure, self-locking, tamper-proof housing for cable terminations and splices. Stakes and bracketry are protected with Thermoplastic Laminated Coating (TLC™), providing a corrosion resistant mounting system that requires no maintenance.

Applications

The SPH Low Profile Enclosures are designed to house broadband passive equipment combinations such as taps and splitters and can also house active equipment such as line extenders and mini-bridgers.

Features

- 600 Series HDC Covers with reduced heights.
- Self-Lock® self-latching covers with various lock head options.
- Complete 360° access working area.
- Universal bracketry provides a wide range of equipment mounting options.
- Mainframe brackets protected with Channell's patented Thermoplastic Laminated Coating (TLC™).
- Base accommodates multiple ducts and conduits.
- Location strips for customized labeling and identification.
- Available in a wide assortment of colors to blend with surrounding environment.
