

MAXED OUT? MAXCELL.

New build or at capacity, MaxCell gives your network more space.

MaxCell's conduit maximization solutions allow operators to maximize their OSP and ISP network capacity while reducing total system cost.

MaxCell increases available conduit space and reduces pulling tension when installing cables. The MaxSpace service reclaims existing conduit space by safely removing innerduct over active cables.

Max Out your network capacity, efficiency and budget with MaxCell.

300% More

Traditional construction in a 4" conduit allows 3 cables to be placed. MaxCell triples the capacity, allowing up to 9 cables to be placed in the 4" conduit.

2X As Fast

Actual Field Experience Report: Installers and Network Engineers can cut conduit installation time in half and increase cable installation speed.

Cuts Total Project Costs

Independent surveys and field experience prove that MaxCell reduces material and labor costs by 50% and more.
