

Ideal for:

- Subscribers desiring a self-managed, “whole house” solution for parental controls
- Generating revenue to Providers through add-on service offerings

Website Sentry Application

Highlights:

Gives Providers a new IP service offering to their subscribers

Subscriber self-managed—no Provider customer service burden

Network-based application, no client software or configuration required

Provides parental controls for all PCs behind the broadband modem—including gaming devices

No user workarounds as with client-based parental control products

Facilitates easy try & buy program

Two URL list product options: Name brand filtering database for premium service or basic content filtering database to include with current services

Website Sentry from PerfTech® is a network-sourced, subscriber-managed parental control facility that generates revenue for Internet providers and fulfills a customer need.

Give Your Subscribers Parental Controls...without Loading Client Software

Website Sentry allows subscribers to manage their own parental control requirements through an easy-to-use web interface. Configuration is simple: subscribers simply select the filter category they wish to use. No special client software, gateway model, or configuration is required.

Website Sentry provides a “scrubbed” pipe to the whole house. This “whole house” solution covers all devices within a home network. It protects all PCs whether Windows, Macintosh, Linux, or the newly announced Google browsing workstation. It covers the children’s friends’ laptops brought over to surf, PDAs on Wi-Fi, and Playstations and other gaming consoles that freely browse the Internet via Wi-Fi. Website Sentry controls Internet access as well as blocks or enables Instant Messaging and USENET access.

The product is available in two versions: as a basic or a premium offering. The basic offering provides a generic filtering list. The premium service uses the SurfControl fail-safe filtering list that is updated frequently and rates over 21 million URLs.

Website Sentry can be installed in existing Bulletin System deployments or as a brand new installation.

Deploying Website Sentry in a new Bulletin System installation occurs with no network downtime and involves simply placing the Web-administered Bulletin Manager at the NOC and one or more Bulletin Directors at aggregation routers such that all downstream subscribers are covered. There is no degradation of network performance.

Network-based, Flexible, and Secure
