## OUTDOOR SATELLITE ROUTER

TDM/TDMA | SCPC Rx-only | OUTDOOR | DUAL GATEWAY | BEAM SWITCHING

High-Throughput Satellites (HTS) open unprecedented opportunities for networking over satellite. UHP-120 is a high-performance router designed specifically for large-scale deployment in broadband VSAT networks operating over HTS. This product combines the Universal Hardware Platform (UHP) architecture, which was developed in the previous generation of the award-winning UHP product line, with the state-of-the-art semiconductor technology. The result is its unique performance. Not only UHP-120 can process 150 000 IP packets per second, 220 Mbps of traffic and two 65 Msps carriers, it can do this in a super-compact size, with low power consumption (less than 10W) and with best utilization of the precious satellite resource, as evidenced by up to 32APSK modulation, 5% spectral roll-off, adaptive modulation and coding, adaptive power control and 96% efficient TDMA protocol.

UHP-120 is equipped with two high-speed demodulators. The dual demodulator in conjunction with a built-in advanced beam switching algorithm facilitates seamless roaming of mobile satellite terminals between distinct beams of HTS satellites.

Rugged weatherproof satellite router UHP-120 is designed for outdoor installation, for example, directly on the antenna. IP67 compliant enclosure guarantees quick start and operating performance over a wide range of temperatures and a harsh environment. Possible customization of the LAN and power supply connectors in accordance with specific customer's requirements.
