

The **Terrace QAM** Hospitality Gateway is a multi-channel QAM to QAM transcryptor for use in the hospitality industry. Demodulated MPEG transport streams are decrypted by CableCARD™ technology and then are either re-encrypted using Pro:Idiom® technology or left in the clear. The MPEG transport streams are re-modulated and then delivered to the desired RF channel.

The Terrace QAM can decrypt 24 programs if equipped with the TQ1007LT+ processor card or 60 programs if equipped with the TQ1007+ processor card and provides up to 64 Output QAM channels to allow a full line-up of customized programming. Local content can also be added to enhance value-added advertising within the hospitality CATV network and further personalize Free-to-Guest offerings.
